

SUSTAINABLE LANDSCAPING PROGRAMME

OUTCOMES

What is the purpose of this course?

The purpose of this course is:

1. To create an awareness of the struggle between nature and man for space on the planet;
2. To provide practical information on how to make a difference, even a small one, in your gardens and communities;
3. To plant indigenous vegetation and to encourage wildlife;
4. Your garden can contribute to the restoration of the natural ecology in your area.
5. Identify the elements in your garden / areas that are examples of loss of sustainability, and measures you would take to mitigate this loss.
6. Micro-climates to be identified and developed.
7. AIP's that are detrimental to the biodiversity of a landscape.
8. Pests to be identified and insect life to identify for ecological understanding.
9. Sustainability including water needs in establishing a less reliant landscape utilizing water coverage.
