

LANDSCAPE DESIGN CONSULTANTS INTERNATIONAL

SUSTAINABLE LANDSCAPING PROGRAMME (course information)

We have been writing for some time about environmental landscaping and ensuring that our landscapes are self-sustaining and adopting a biodiversity approach. I have briefly described our sustainable landscaping programme that we have launched.

Employees working in the landscaping industry need to practice sustainable methodology in the turn around. This programme will guide management and supervisory staff in their understanding of biodiversity and sustainability. Plant material installation will need to incorporate endemics / indigenous which will be self-enhancing and self-sustaining in the long term.

SUSTAINABLE LANDSCAPING PROGRAMME

COURSE INFORMATION

DAY ONE

- The process of Biodiversity and Sustainable landscaping.
- The value of preserving biodiversity/sustainability
- Causes of biodiversity/sustainability loss.

CASE STUDY on learning and discussion.
